Removed polyp

Additional polyps found on CNN-overlaid videos

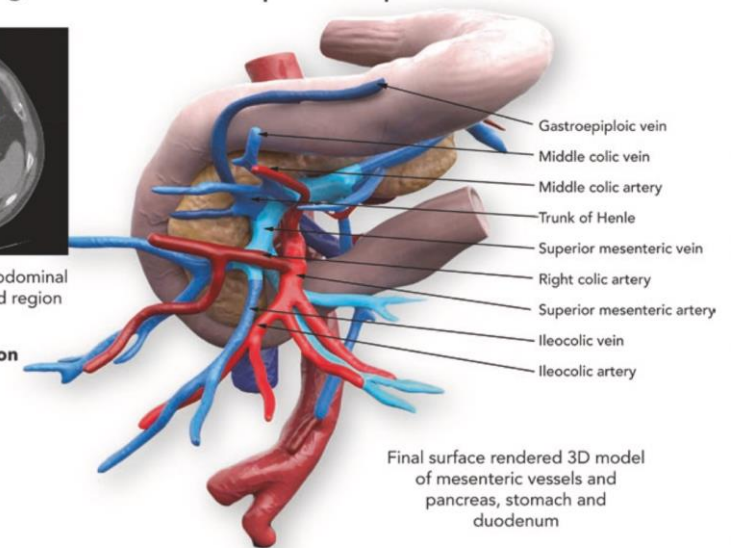

From segmentation to 3D patient specific model

Segmented portovenous CT abdominal imaging using semi-automated region growing approach

Available segmentation software

- 3D Slicer
- ITK SNAP
- Synapse Vincent
- Seg 3D
- Image J
- Osirix X
- Materilise mimics

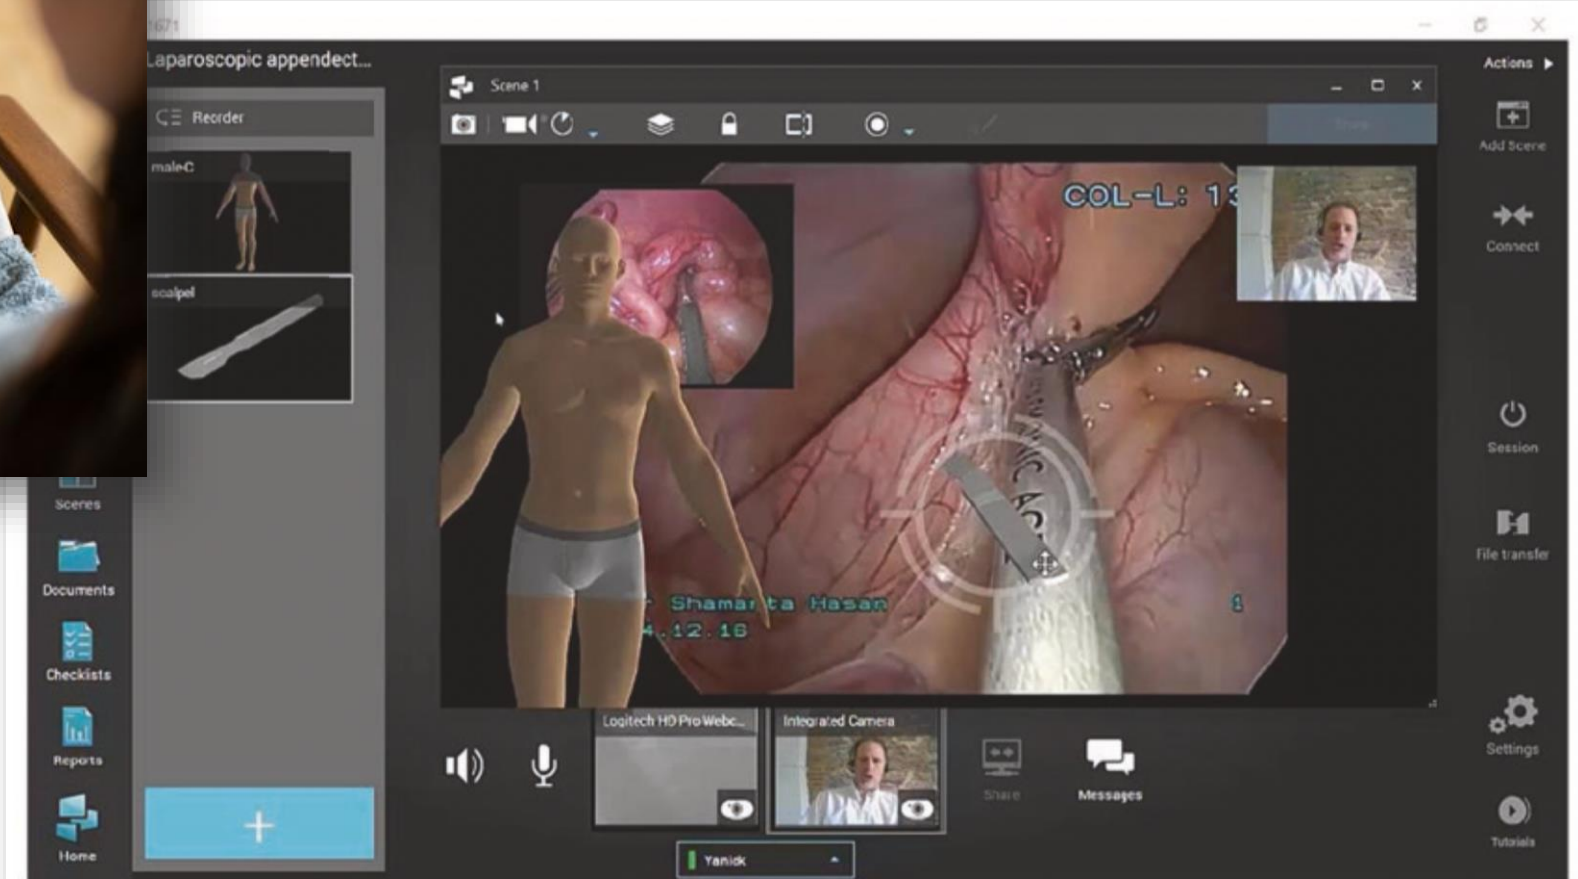

Final surface rendered 3D model of mesenteric vessels and pancreas, stomach and duodenum

Master Digital Health Care

IN THE NEXT 5 YEARS

Portable medical devices for professionals

Portable diagnosis and treatment devices for medical professionals

38.90%
widespread realities

75.56%
realities

Health sensors for consumers

Wearable devices, digital tattoos, smart clothes for monitoring health unobtrusively

37.66%

71.58%

IoT in healthcare

Internet of things in healthcare devices

34.66%

65.33%

3D printing

3D printed tissues, skin, blood vessels, bones

32.42%

64.34%

Genomic analysis

Receiving treatment customised to our molecular makeup and genetic background

28.93%

59.85%

Robotics

Robotic nurse assistants to support the work of healthcare professionals with superhuman strength and precision

28.43%

60.6%

Virtual reality in healthcare

Usage of VR in medical training, relaxing chronic patients, speeding up recovery of patients

26.43%

63.84%

AI in medical decision support

The expanding role of artificial intelligence in monitoring and diagnosis

24.44%

54.37%

Augmented reality (AR)

Projecting digital data onto real-life imagery, used for diagnosis and health education

20.95%

61.6%

IN THE NEXT 25 YEARS

Tele-Medicine

Lack of doctor shortages will be solved via tele-medicine, via Uber's of healthcare to bring the attention and expertise of doctors to the masses

43.89%
widespread realities

75.81%
realities

Hospital redesign

Revolutionary changes in traditional "general hospitals"- hospitals becoming smaller, as more healthcare (diagnosis and treatment) will be done at home

39.65%

74.06%

Precision medicine

Using big data and AI to identify medical approaches for patients based on genetic, environmental and lifestyle factors

34.16%

74.31%

Devices inside the body (nanotechnology)

Nanometer-sized robots in our body will cure and monitor health

28.43%

64.84%

Man-made organs

3D printing of organs

27.18%

59.35%

Ageing research

Ageing will become a treatable disease – people will cease to age

26.68%

55.36%

Designer babies

Manipulate DNAs to customise babies

20.70%

45.14%

Brain-Computer Interface (BCI technology)

Our brains will be directly connected to AI

19.45%

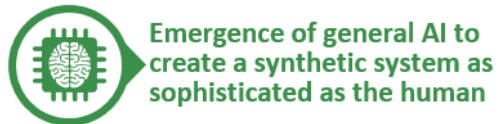

46.38%

The Economist

promising future, but barriers remain

The future looks promising for AI-based automation ...

... but barriers that restrict its universal acceptance remain

MDHC @ UNIPD

Formazione viva.

**The best way to predict
your future is to create it.**
